Module Code & Module Title
Level 5 – Network Operating Systems

Assessment Type
Logbook 8
Semester
2025 Autumn

Student Name: Eijkeyal Pakhrin

London Met ID: 24***49**

College ID: NP0***022**

Assignment Due Date: Tuesday, December 16, 2025

Assignment Submission Date: Friday, December 12, 2025

Submitted To: Nischal Pradhan

Word Count (Where required): 638

I confirm that I understand my coursework needs to be submitted online via MST Classroom under the relevant module page before the deadline for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

Practice of Basic UNIX Utilities and File/Directory Management

1 Introduction

In this workshop, I learned essential UNIX/Linux utilities required for file management. The main focus of this logbook is to understand the directory creation, navigation file, file manipulation, permission handling and the uses of command like mkdir, cp, mv, ls, chmod and rm etc.

2 Aim

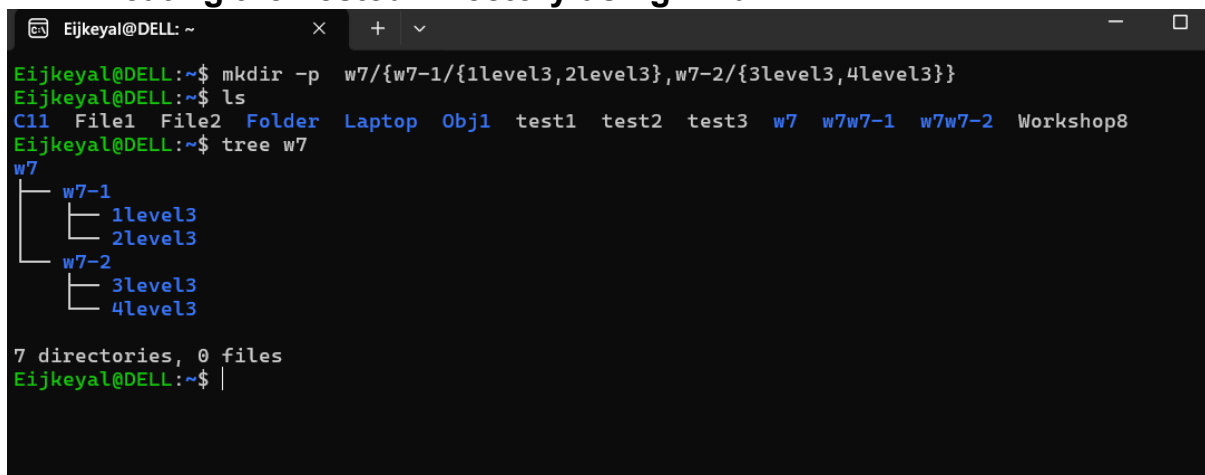

To create, manage, and manipulate files and directories using UNIX/Linux utilities and understand how permissions work in Linux.

3 Objectives

- Create nested directory structures and declaring parent directory using -p.
- Navigate directories using relative and absolute pathnames (. and ..).
- Create, copy, move and display all files.
- Delete file and directories using rm and rmdir.
- View and set the permissions of file for different users, group or others.

4 Configurations steps

4.1 Creating the nested Directory using mkdir.

```
Eijkeyal@DELL: ~  
Eijkeyal@DELL:~$ mkdir -p w7/{w7-1/{1level3,2level3},w7-2/{3level3,4level3}}  
Eijkeyal@DELL:~$ ls

5 Conclusion

To conclude, this workshop I learned essential UNIX commands which is related to the directory handling, file handling, file manipulation and permissions management. This also me to safely remove directories and files using interactive option using ri. These skills are fundamental for system management, administration, scripting and understanding how operating systems manages users and files.
